SUMMARY

I'm enthusiastic about pursuing a career in Artificial Intelligence, especially Image Processing. As a dedicated and motivated candidate with strong organizational abilities, I'm eager to join a team and help them reach their company goals. I'm committed and passionate, ready to apply the knowledge and skills I've gained on my learning journey to make a meaningful impact and build a fulfilling career in my field.

EDUCATION

- **Bachelor of Information Technology**
VNU University of Engineering and Technology August 2021 - July 2025
- IELTS - International English Language Testing System score: **7.5**
- SAT - Scholastic Aptitude Test score: **1460**

TECHNICAL SKILLS

- **Programming Languages:** Java, C++, Python, JavaScript, CSS
- **Languages:** English, Vietnamese, Mandarin Chinese
- **Python Library:** Matplot, OpenCV, Numpy, PyTorch
- **Framework/Platforms:** NodeJS, ReactJS, Flask, Flutter
- **Database Management System:** MySQL, SQLAlchemy
- **Tools:** Docker, Github, Anaconda

WORK EXPERIENCE

AI Engineer specified in Computer Vision, FPT Internship May 2024 - August 2024

- Training camera data footages to help building a security surveillance system
- Building a complete Face Recognition system using OpenCV, FaceNet, MTCNN to detect face identity from camera footages
- Learn to read English Scientific Paper and practise team building

PROJECTS IN UNIVERSITY

A Harris Corner Detection algorithm Implementation and Comparision

- **Github:** <https://github.com/QDuongDubb/A-Harris-Corner-Detection-implementation-and-Comparison>
- **Description:** A code implementation of Harris Corner Detection algorithm by me. I also test the algorithm on a trained database to test its performance, compare it to different corner detection algorithms.
- **Technology:** Making use of Python with Python Library

An implementation of EMOCA, Emotion Driven Monocular Face Capture and Animation

- **Description:** A contest winning code implementation of the algorithm from CVPR2022 paper: EMOCA: Emotion-Driven Monocular Face Capture and Animation. This is a two man group
- **Technology:** Learn to use OpenCV and other 3d face reconstruction techniques

MAD RACER: A build-from-the-ground-up racing game solo project

- **Github:** <https://github.com/QDuongDubb/RacingGame>
- **Description:** Conceptualized, designed, and developed "Mad Racer," a competitive obstacle-course racing game. Key responsibilities included creating engaging gameplay where player maneuver a high-performance vehicle, strategically evade opponents, gather valuable point-scoring items, and strive for extended survival times.
- **Technology:** SDL, CMake, C++

A full web and android attendance system for university using FaceNet network

- **Description:** My graduation thesis for VNU University of Engineering and Technology. This project, built with a Flutter mobile app (client) and a Python/Flask backend (server), tackles manual attendance issues like time consumption, errors, and fraud. The system uses Facenet for facial identification, extracting embeddings from user-captured images, comparing them with registered data, and recording presence. Key contributions include system analysis, architectural and database design, API development, and integration of the Facenet model for efficient and reliable attendance tracking.
- **Technology:** Python, Flask, Flutter, Dart, SQLAlchemy, CSS, JavaScript

OTHER ACTIVITIES AND AWARD:

- Consolation prize in the school-level science research competition
- I engaged in research activities within the Human-Computer Interaction Lab at UET University
- I fully participated in all school extracurricular activities
